Possibly, but DCT is better for driving performance. We've heard more and more details lately regarding the upcoming revival of Toyota Supra. Or Gaza Supra. A what. Toyota is returning its famous sports car performance and we are thrilled. Despite the fact that next month we saw Supra Racing Concept in St. Petersburg, it is expected that the production car will debut later, perhaps at the next Tokyo Motor Show. We also know Supra will come exclusively with dual-clutch transmission and without manual option. How so? Well A pretty good reason why. Supramkv.com Supramkv.com Forum a translated interview from the Japanese language magazine Info Seek was discussed with Toyota's chief engineer Tetsuya Sada and, of course, Supra and his choice of transmission. Asked about the guidance, Sada replied that this was not the case at the moment; it's just a dual-clutch transmission. But how is that? How difficult it is, in fact, to offer a guide, even in the US, where hand-equipped sports cars are still quite popular. Because Supra will have too much torque to handle the manual. I wonder whether it won't

be fun if (the) MT is a great power car like the next Supra. Increasing engine torque will make the shift feel worse. If so, it is highly doubtful that the MT specification is necessary. I agree. In the end, Supra, like its next-generation BMW No.4 platform cousin, will come powered by a 3.0-liter turbo in-line-six of about 335 hp and 332 lb-ft of torque. And yes, it's a high torque figure, and it sounds like Toyota figured the manual, at least with this engine, wouldn't be fun to use. On the contrary, it can be one of those so-called heavy manuals that doesn't quite nicely shift. So, DCT is just the best choice. In addition, Tada confirmed Toyota introduced the Supra Racing Concept in front of the road car because of its intention to take its race, particularly the GTE class for endurance races such as Le Mans. Jupiterimages/Photos.com/Getty Images The mechanical transmission fluid in your Toyota lubricates gear and makes it easy for you to change gears without damaging the internal transmission components. Since the planetary transmission system on Toyota transmissions produces a lot of heat, you must replace your Toyota fluid transmission at least once every two years. However, before you replace the liquid, you should check it periodically. Stress created by vigorous or aggressive driving can shorten the life of the transmission fluid in the transmission. Making sure that the level of fluid is correct is very important. Start the engine and let it warm up to normal operating temperature. When the needle on the water temperature sensor sits on or near the middle of the sensor, it's time to check the fluid transmission. Open the hood and pull the transmission out of the transmission filler's neck. Dipstick transmission is a red loop handled by a dipstick that sits at the back of the engine compartment next to the firewall. Wipe off the end of the dipstick then place it all the way back into the gear filler neck. Pull it back and check the level of the liquid. The level of fluid should be between the top and bottom marks at the end of the dipstick. Relax all apparently upcoming Toyota Supra will have a manual gearbox after all. Although a lot of information specifications do not have a manual transmission, BMW No 4 (jointly with Toyota) really points to a manual option. In addition, one of the IH8mud.com with a Toyota employee, and they confirmed the rumors of a manual transmission. Gear. Said Toyota official also told the forum participants that the upcoming Supra would not have a BMW in-line-6, but a turbocharged V6, possibly a 3.5-liter. It was rumor-floating around for a while, and although it intrigued many, it was proven wrong. The co-designed engine is reported to push over 400 horsepower, a lot of ponies to get the small coupe going. Obviously no real performance statistics or even final design visualizations have been released, but it's possible we'll see Supra debut at this year's Tokyo Motor Show. There is also the possibility of a hybrid transmission, but it seems a little less likely as no true evidence led us to believe it. New rumors suggest that the hybrid version may also be on the cards. After a 16-year hiatus in the automotive industry, Toyota Supra finally made a triumphant comeback this year at this year's Motor Show, albeit in the form of the GR Supra Racing Concept. Precious few details have been revealed about the car, and while it's a shame we're not looking in awe at the final car production, the style gives us a clear idea yet of what the final car will look like if you remove the racing car bits. Many enthusiasts also wondered whether the new Supra would have a manual gearbox. Answer? Can. Unfortunately, previously leaked information suggested you would not be rowing gear manually, which seems like a travesty in a Japanese sports car. The GR Supra Racing concept doesn't fill us with hope either, as it sports paddle switches on the steering wheel and is not a manual shifter. (There are three pedals, but the clutch is used to just get the car rolling rather than shift through the gears.) There's still hope the resurgent Supra will have a manual gearbox, however. During an interview at the St. Petersburg Motor Show, AutoGuide spoke with Toyota's chief engineer Tetsuya Tada on the subject. It makes sense for the new Supra to have a guide, Tada-san told the publication. I'll try my best,' he promised. After all, Supra is not designed to set lap records. Instead, Tada-san is working to make sure that the car is engaging, fun to drive, and that it will have an ease of agility that is more important than quantitative numbers. This gives us new hope that the new Supra will please purists by offering traditional guidance. However, Tada-san and his team have been consulting with Supra fanatics to learn their priorities for a reborn sports car. High on the list was a turbo straight six engines, a front engine and a rear-wheel-drive layout, and the ability to make changes. The demand for a manual transmission was not high. Don't be surprised then if the new Supra is only offered with automatic, but don't rule out a guide just yet either. A new Top Gear report suggests that the new Supra, which is being developed in conjunction with the BMW No4, will pack a recalibrated BMW engine pumping out 450 horsepower. The hybrid version was also being considered, but the plans were not More. As for when the resurgent Toyota Supra road car debuts? We've previously been inspired to believe it will break the lid in just a few weeks at the New York Auto Show, but Top Gear now reports that it won't debut until the 2019 Detroit Auto Show next January.
